

VR Systems Workshop

On March 24, 2015 your Supervisor of Elections and staff had the opportunity to attend a workshop hosted by VR Systems in Marion County. This workshop was designed as a roundtable opportunity for counties across the state to give feedback and input on the EViD unit (electronic voter identification check-in station) as well as our voter registration management system. Counties were able to discuss issues encountered in the past election and to discuss what to expect in 2016. Networking and sharing best practices is just one of the many ways your Supervisor of Elections prepares for a busy election year and we look forward to implementing some of the ideas we brought back to Taylor County.
